The image shows a software dialog box titled "Dimension Reduction Palette". It contains several settings for variable reduction. Under "Sparsely Populated Variables", there is a checked checkbox "Exclude variables fewer observations less than _% (Default is 5%)" with a dropdown menu showing "5". Under "Forward Stepwise OLS ($X_i, X_j \times X_k, X^* + Z, (X^* + Z)^* Z$)", there are four checked checkboxes, each with a "0.05" dropdown menu: "Set Cut-off for Main Effects (Default is 0.05)", "Set Cut-off for Non-linear Interaction (Default is 0.05)", "Set Cut-off for Summation (Default is 0.05)", and "Set Cut-off for Summation (Default is 0.05)". On the right side, there are four buttons: "Reduce", "Advance to Modeling", "Cancel", and "Review Predictors". At the bottom left, it says "Number of Predictor Variables reduced to: 12".
